

**Salt River Project Agricultural and Water District
E-27 (Demand Based Rate plan)
Customer Generation Price Plan for Residential Service**

By signing this disclaimer, you confirm your understanding that the economics behind your decision to buy this solar system may change. Also, the solar rate plan proposed by SRP is a time of usage plan with demand charges. Any potential savings will depend on a customer's ability to use power in a way that conforms to this plan. You further understand that even with a "load controller" you could potentially exceed the demand set for the home due to uncontrolled loads such as a stove or added loads after the system is installed.

Any potential savings are based on historical usage and your ability to maintain historical usage under the "prescribed" demand threshold.

You further acknowledge having seen and understood the demonstration video (<https://youtu.be/6N2cX0Na5cM>) of how the E-27 series of products work together to offer reduced energy costs. Neither Titan Solar Power nor its affiliates have made any guarantees relating to savings. Any estimates of saving are purely "estimates" and are in no way guaranteed by Titan Solar Power or its affiliates.
