12.14 New Mexico Mechanical Lien Law. Under the New Mexico Mechanics’ Lien Law, any contractor, subcontractor, laborer, supplier, or other person or entity who helps to improve your property, but is not paid for his or her work or supplies, has a right to place a lien on your home, land, or property where the work was performed and to sue you in court to obtain payment. This means that after a court hearing; your home, land, and property could be sold by a court officer and the proceeds of the sale used to satisfy what you owe. This can happen even if you have paid your contractor in full if the contractor’s subcontractors, laborers, or suppliers remain unpaid. To preserve their rights to file a claim or lien against your property, certain claimants such as subcontractors or material suppliers are each required to provide a document called a “Preliminary Notice.” Contractors and laborers who contract with owners directly do not have to provide such notice since you are aware of their existence as an owner. A preliminary notice is not a lien against your property. Its purpose is to notify you of persons or entities that may have a right to file a lien against your property if they are not paid. In order to perfect their lien rights, a contractor, subcontractor, supplier, or laborer must file a mechanics’ lien with the county recorder that then becomes a recorded lien against your property. Generally, the maximum time allowed for filing a mechanics’ lien against your property is 90 days after substantial completion of your project.

"Solar energy system" means an installation that is used to provide space heat, hot water or electricity to the property in which it is installed and is:

- an installation that utilizes solar panels that are not also windows, including the solar panels and all equipment necessary for the installation and operation of the solar panels;
- a dark-colored water tank exposed to sunlight, including all equipment necessary for the installation and operation of the waste tank as a part of the overall water system of the property; or
- a non-vented trombe wall, including all equipment necessary for the installation and operation of the trombe wall.

Receipts from sale and installation of solar energy systems pursuant to Laws 2007, Chapter 204, Section 10 may be deducted from gross receipts when the sale is made to a person who submits a signed Form RPD-41341, Solar Energy Systems Gross Receipts Tax Deduction Purchase and Use Statement, or when the seller can provide evidence acceptable to the department that the service or equipment is purchased for the sole use of the sale and installation of a qualified solar energy system. Evidence acceptable to the department includes a description of what was sold, the amount of the sale and a description of the solar energy system being sold and installed.

When a seller accepts in good faith a person's written statement that the person is purchasing the equipment for the sole use of the sale or installation of a solar energy system pursuant to Laws 2007, Chapter 204, Section 10, the written statement shall be conclusive evidence that the proceeds from the transaction with the person having made this statement are deductible from the seller's gross receipts.

Solar energy system includes components or systems for collecting and/or storing energy, but does not include components or systems related to the use of the energy. Examples of use would include the pipes carrying heated water to a faucet or the electrical wire carrying electricity to an outlet.

Installation of a solar energy systems includes replacement of some part of the system, or a similar change to the system

that would qualify as an adjustment to basis for federal income tax purposes. Labor for maintenance or service of a solar energy system does not qualify for the deduction in the absence of an installation of some part of the system. Labor to perform postinstallation adjustments to the solar energy system qualifies when the adjustments are performed to optimize the operation of the solar energy system as part of the initial installation and are performed within one year of the initial installation.

DEFINITIONS:

Equipment means an essential machine, mechanism, or a component or fitting thereof, used directly and exclusively in the installation or operation of a solar energy system. Solar thermal collector means an energy system that collects or absorbs solar energy for conversion into heat for the purposes of space heating, space cooling or water heating.

Solar panel is a solar thermal collector, such as a solar hot water or air panel used to heat water, air, or otherwise collect solar thermal energy. "Solar panel" may also refer to a photovoltaic system.

Solar thermal energy is a technology for harnessing solar power for practical applications from solar heating to electrical power generation.

Photovoltaic system means an energy system that collects or absorbs sunlight for conversion into electricity.
